The 'new paradigm' of outcomes-based education in perspective

SPT Malan

OPSOMMING

Uitkomsgbaseerde onderwys (UGO) word deur sommige as 'n paradigmaskuif in die onderwys ge-propageer. Die doel van die artikel is om hierdie aanspraak toe te lig teen die agtergrond van veral vier onderrig- en leerbenaderings, naamlik doelwitgerigte onderrig, bevoegdheidsgbaseerde leer, be-meesteringsleer, en kriteriumgerigte onderrig en a-sessering.

Teen die agtergrond van die voorgemelde benaderings word getoon dat UGO nie 'n paradigmaskuif meebring nie. UGO kan ten beste beskryf word as 'n eklektiese onderwysfilosofie wat op die beste elemente in hierdie onderwysbenaderings berus. Oor-eenkomsdig die behoefte en eise wat aan 'n nuwe demokratiese Suid-Afrika gestel word, is die elemente egter in 'n visioére raamwerk saamgevoeg om aan die land se mensekragbehoeftes en werkverwes- tes te voldoen.

Daar is ook voordele aan UGO verbonde. Die belangrikste hiervan is die nasionale fokus op onderwys as 'n middel tot 'n doel en nie 'n doel op sigself nie. 'n Behebtheid met toetse en eksamens word versag met behulp van deurlopende a-sessering, en die resultate van sodanige a-sessering word in 'n re-mediërende hoedanigheid aangewend. Voorberei-ding vir lewenslange leer word op dié wyse 'n hoë prioriteit.

Onderwyspraktisyns, leerders en ouers sal elkeen hul bepaalde rol moet speel om te verseker dat UGO 'n sukses is. Dit verg uiteraard harde werk en toewyding van diegene wat met onderwys en opleiding ge-moeid is. Onderwyspraktisyns moet daarop ingestel wees om onderwys- en leerlinge te beplan en te be-stuur sodat die behoefte en eise wat aan 'n nuwe demokratiese Suid-Afrika gestel word, in die elemente egter in 'n visioére raamwerk saamgevoeg om aan die land se mensekragbehoeftes en werkverwes- tes te voldoen.

INTRODUCTION

Education is aimed at creating teaching and learning environments that would bring about desired changes in learners, whether to be more knowledgeable, better skilled or to influence their attitudes and values positively. The essence of teaching and learning is to plan teaching events (contents, strategies, etc) and to ascertain to what extent learners have acquired the intended competences.

Uncertainty about the desired learning outcomes and failure to assess outcomes properly could end in a situation where learners only attained pseudo-knowledge, pseudo-skills, pseudo-attitudes and pseudo-values. On completion of their studies these learners are awarded a certificate inherently implying that they have attained certain competences whereas in fact they have not. Disenchantment with education in this regard is obvious - but not a new phenomenon.

Dissatisfaction with education policies and practices have time and again led to initiatives to adjust these practices and systems to meet the needs of learners at the time. However, not all of these turned out to be to their advantage, which gave rise to revised initiatives.

Outcomes-based education [OBE] is currently fa-voured internationally to promote educational renewal and has been implemented in countries such as Canada, the United States and New Zealand. However, it has already elicited harsh criticism from opponents of the movement (Claassen, 1998; HTTP, 1994). South Africa is introducing its own version of OBE as the basis of Curriculum 2005 (Claassen, 1998; Malan, 1997:73). And, as elsewhere in the world, reactions vary between commendation by its proponents and denouncement by its critics.

Curriculum compilers in South Africa hail OBE as a major paradigm shift in education (Reddy, 1995:13; Department of Education, 1997b; Arjun, 1998). But how original is the OBE dispensation, and does it actually represent a paradigm shift? This article addresses these issues by tracing the roots of OBE and by putting outcomes-based education into perspec-tive.

WHAT IS OUTCOMES-BASED EDUCATION?

William Spady is regarded as OBE's leading advocate and a few points he makes would suffice.
Spady (1994:1) defines OBE as a … comprehensive approach to organizing and operating an education system that is focused on and defined by the successful demonstrations of learning sought from each student. Outcomes are … clear learning results that we want students to demonstrate at the end of significant learning experiences … and … are actions and performances that embody and reflect learner competence in using content, information, ideas, and tools successfully (Spady, 1994:2). Regarding the OBE paradigm, Spady (1994:8) states: … WHAT and WHETHER students learn successfully is more important than WHEN and HOW they learn something.

Ten key components underlie what is termed the outcomes-based information age paradigm (Spady, 1994:36-40). At issue here is whether it is in fact a new education paradigm.

THE ROOTS OF OBE

Spady (1994:4) concedes that the world is filled with examples of outcomes-based models, and even that outcomes-based systems go back at least 500 years to the craft guilds of the Middle Ages. The concept of outcomes-based models and systems is therefore not new.

Analysis of educational reform movements in the past reveals prominent features of OBE embedded in the educational approaches described below.

The educational objectives movement

Incongruity between what is being taught and what is being learned led to the setting of objectives for teachers and learners. McAvoy (1985:28) traced the documented use of objectives in education back as far as 1860 when Spencer in Britain formulated objectives according to a classification of human activities. In 1924 Herbart in Germany stressed the importance of lesson planning and stating objectives to guide teaching activities. In 1949 Tyler gave further impetus to the objectives-oriented movement by stressing the importance of objectives in curriculum design and teaching practices. He listed four questions as the basis for his means-end or product-oriented rationale for curriculum design (Tyler, in Arjun, 1998:24):

* What educational objectives should the school aim to achieve?
* How does one select learning experiences that are likely to be useful in attaining these objectives?
* How should learning experiences be organised for effective instruction?
* How would the effectiveness of learning experiences be evaluated?

Tyler's rationale has been used extensively by curriculum practitioners and formed the basis of Wheeler's well-known model of curriculum design which served as the main curriculum design model for several decades (Arjun, 1998:24). The basic OBE philosophy for curriculum design is firmly rooted in both Tyler's and Wheeler's models.

During the fifties the work of Bloom (1956) and his coworkers on developing taxonomies for educational objectives became important. These benchmarks were used in the formulation of objectives and the development of criteria to establish whether learners have actually attained acceptable standards compared to the desired learning outcomes. Bloom's (1956) work, particularly in the cognitive domain, remains invaluable for OBE assessment.

After Bloom came Mager whose work was first published in 1962. It … captured the imagination of many teachers and helped spark off a wave of enthusiasm (and controversy) over objectives (McAvoy, 1985:29).

Guidelines (HTTP, 1999) on how to write learning outcomes in OBE closely resemble Mager's (1984:23-104) guidelines in terms of expected performance, the conditions under which it is attained, and the standards for assessing quality.

The competency-based movement

Competency-based education was introduced in America towards the end of the 1960s in reaction to concerns that students are not taught the skills they require in life after school. The same concern has been expressed about education in South Africa.

Competency-based education is based on six critical components (Van der Horst & McDonald 1997:10-11):

* Explicit learning outcomes with respect to the required skills and concomitant proficiency (standards for assessment)
* A flexible time frame to master these skills
* A variety of instructional activities to facilitate learning
* Criterion-referenced testing of the required outcomes
* Certification based on demonstrated learning outcomes
* Adaptable programmes to ensure optimum learner guidance

All six components are prominent in the OBE approach. Competency-based education also supports the notion that the learner is accountable for his or her own achievements. This is another major tenet underpinning OBE.

The mastery learning movement

Mastery learning was initially introduced to provide intervention programmes for learners with mild disabilities and those who were at risk in traditional educational settings (Guskey et al, 1995). The authors state that research has confirmed the applicability and value of mastery learning in education to provide learners at all levels with similar, individualised assistance. With sufficient opportunities and supported by an appropriate learning environment, materials and guidance, most learners would be successful in their
learning tasks. This notion is also reflected in OBE.

The following main characteristics of mastery learning, also reflected in OBE, apply:
- Ascertaining prerequisite knowledge or skills to attain goals
- A flexible time frame to achieve goals
- Using different media and materials to create enriched teaching/learning contexts
- Formative evaluation to provide feedback for both teaching and learning improvement

Criterion-referenced instruction and assessment

Criterion-referenced instruction and assessment are well known and form an integral part of all types of performance-based assessment. Mpepo (1998) describes criterion-referenced instruction as a form of mastery learning. It is based on attaining specified objectives and on testing for competence in terms of the criterion stated in the objective. This form of instruction compares a learning outcome or mastery of competencies with a predetermined external standard. Achieving the set standard signifies ‘success’, and failing to achieve the standard implies ‘not yet up to standard’, which is followed by remedial intervention.

Criterion-referenced assessment is the preferred mode of assessment in OBE.

Integrating educational approaches

In lobbying for a change to the traditional approach to teaching and learning, Malan and Jorissen (1990) and Kachelhoffer et al. (1992) initiated a three-tiered eclectic framework for curriculum design and teaching/learning practices. The roots of this framework are firmly embedded in all the above-mentioned movements.

The following are the main features of the model – and distinctive features of the current OBE approach:
- It is needs-driven. Curricula are designed in terms of the knowledge, skills and attitudes expected from graduates and aim to equip students for lifelong learning.
- It is outcomes-driven. The model has a line that runs from taking cognisance of training needs to setting an aim (purpose) for the programme, goals for syllabus themes, learning outcomes, and finally assessing the learning outcomes in terms of the set learning objectives.
- It has a design-down approach. Linked to needs and the purpose of the programme, learning content is only selected after the desired outcomes have been specified. Content becomes a vehicle to achieve the desired learning outcomes which are aimed at inculcating a basis for life-long learning.
- It specifies outcomes and levels of outcomes. Learning objectives are described in terms of Bloom’s (1956) cognitive, affective and psychomotor domains and set according to Mager’s (1984) guidelines for formulating objectives.

The focus shifts from teaching to learning. The model has a student-centred learning approach where lecturers act as facilitators. Study guides help the learners to organise their learning activities, and group work, continuous assessment and self-assessment are major features.

The framework is holistic in its outcomes focus. Although the learning objectives are aimed at learning at grass-roots level, they are linked to goals and aims at higher levels. Attaining learning objectives is therefore not an end in itself; it provides building blocks for achieving higher-level outcomes.

Table 1 depicts the coherent and holistic relationship between the aim of a programme, its goals, learning objectives and evaluation strategies. The learning objectives are clearly not set for the sake of achieving the objectives per se, but they serve as a means to attaining a programme aim. This same coherent and holistic premise underpins OBE.

OBE IN PERSPECTIVE

Does OBE represent a paradigm shift?

It is true that the official version of the curriculum system which OBE is replacing does not meet modern educational needs or expectations. In terms of the life skills learners need and the demands of the workplace, the dominant transmissional approach did not prepare learners adequately for work, further or higher education, or life in general (Reddy, 1995:7-8). This is the same kind of disenchantment that initiated the competency-based movement.

However, does replacing the previous system with an OBE approach represent an educational paradigm shift? Are OBE and its philosophy and practice so different that being promoted as an educational paradigm shift is warranted? The answer to this question is an emphatic no.

According to Mouton (1996:204), a paradigm represents "... a collection of mutually accepted achievements (including the theories, exemplary solutions, predictions and laws). In this sense, a paradigm is primarily a model for conducting normal research. When OBE being a paradigm shift is analysed in terms of these constructs, it becomes difficult to support the claim.

There is as yet no collection of mutually accepted achievements in terms of new theories on OBE, there are no exemplary solutions to the challenge of total intellectual and potential development of learners, predictions of the value of OBE have not been proven, and laws validating OBE as an acceptable practice and construct are not apparent. In other words, no research base to verify the claims of OBE has yet been established and the claim of a major paradigm shift can therefore not be substantiated.

At best OBE may be described as an eclectic philosophy which takes the best from several past educational approaches and incorporating them in a new system that is appropriate to the needs and demands of a new, democratic South Africa. OBE’s rationale and practices may be set in a different context for different needs, but its tenets can be clearly traced to older approaches, once also heralded as ideal solutions only to be discarded.

In terms of Kuhn’s scheme of scientific revolution, Arjun (1998) also indicates that OBE does not represent a paradigm shift. The author contends that although the science of education is in the midst of a paradigmatic crisis, the means-end paradigm of Tyler is still dominant. In fact: Even the proposed new curriculum makes use of this paradigm, which indicates that there is no major paradigm shift (Arjun, 1998:25).

OBE as a transformational approach

Contrary to the transmissional approach of traditional teaching, Spady (1994:94-98) characterises OBE as a systems transformation approach. Claassen (1998:34) states: OBE is a transformational perspective on the curriculum. It offers a dialogue between learner and the curriculum where the learner interacts with sources of knowledge, reconstructs knowledge, and takes responsibility for his or her own learning outcomes. In the same way the teacher becomes a facilitator in the teaching and learning situation instead of acting as a source of information transferring content to learners. From this viewpoint the transformational character of OBE is influenced by the mastery learning and competency-based education movements.

Spady (1994:36-40) identifies ten key components that underlie OBE as a transformation approach, namely outcomes-defined, expanded opportunities for learners, performance ‘credentialling’, concept integration, instructional coaching, culminating achievement, ‘inclusionary’ success, cooperative learning, criterion validation and collaborative structures. Van der Horst & McDonald (1997) redefined these components as characteristics of transformational OBE. When these characteristics are analysed in terms of their foundational roots (as indicated above), the eclectic nature of OBE becomes obvious (see Table 2).

The characteristics of OBE are listed in the first column, and the major roots of each characteristic are indicated in brackets. Transformational aspects that apply to each characteristic appear in the second column (Department of Education, 1997a:7; Van der Horst & McDonald, 1997:20; Claassen, 1998:35-36).

As indicated in Table 2, it is only in terms of ‘Geared towards integrating concepts across the curriculum and learning areas’ and ‘Based on collaborative structures allowing for democratic inputs from the community’ [OBE’s sosoconstructivist approach], where no definite roots can for certain be traced to the educational approaches described earlier on. All other characteristics and their accompanying transformational aspects of OBE are firmly based on other educational approaches, reflecting the eclectic nature of the OBE approach.

Claassen (1998:38) notes that proponents of OBE often express a simplistic and one-sided critique of the discredited previous educational model in South Africa. Looking at transformational aspects, it is obvious that many progressive educators, trainers, schools and educational institutions have in any case been adding value to curricula by following a learner-centred and problem-based learning approach.

Was the previous system that bad? One only needs to look at the scientific, economic and political achievements of many people who are products of the old system to appreciate the fact that they excelled despite the much critiqued transmissional mode of teaching. It is a matter of experience to confidently state that a transmissional approach will always have a place in education. In fact, many students and teachers still prefer a transmissional rather than a transformational approach. The reason is simple: it is much easier to teach and to learn within a transmissional framework. However, the broader educational context necessitate an official move to a transformational approach.

Assessment

The ultimate purpose of assessment is to validate learning outcomes – be it for diagnostic, formative or summative purposes. The role of assessment in OBE is part and parcel of the aims of assessment in all its root models. OBE, however, highlights continuous and criterion-referenced assessment.

OBE aims to assess the competences of learners in their totality. It takes a holistic approach in describing the competence of a learner in terms of knowledge, skills and values, and assessing competence by using a variety of assessment approaches. In fact, the smallest unit of assessment must cover the integrated knowledge, skills and values that apply in practice in a specialised context (Department of Education, 1998:26). This calls for performance-based and authentic assessment strategies against the background of criterion-referenced assessment.

Fraser (1999:16) describes authentic assessment as ... assessment tasks that resemble skills, activities and functions in the real world and in school. Authentic assessment aims at determining competences in contexts that closely resemble situations in which these competences are required. Assessment then becomes a learning experience in which learners are prepared to apply their knowledge, skills and values in an integrated manner.

Assessment of knowledge, values and skills relates to assessing elements in the cognitive, affective and psychomotor learning domains. The taxonomies of Bloom (cognitive domain), Krathwohl (affective domain), ...

lies largely lost under an avalanche of political intransigence toward educational change in the early '90s, according to his Chapter 3, What went wrong, for an overview of resistance and reactions to OBE.

What is going to happen in South Africa? If OBE survives, the academic quality of the first entrants of the OBE cohort into the workplace and higher-education sectors will not only reveal the assumed benefits and values of OBE, but its shortcomings as well.
